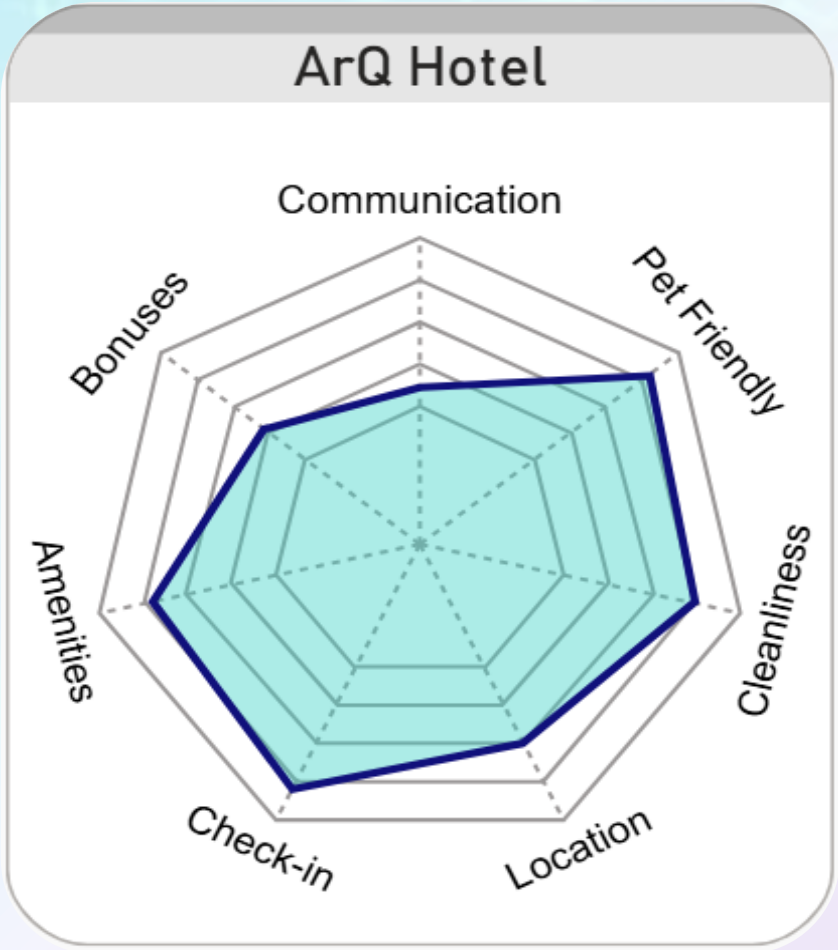
DATA PILLS 01

Most people ignore Radar Charts ...because they think they're limited or expensive



UDF+DAX+SVG in Power BI

makes it flexible, free scalable, secure, and 100% native!

- Fully dynamic visuals
- Flexible shapes & labels
- Scalable, reusable logic
- No external visuals
- No security risks

MIGUEL MADRIZ

DATA PILLS 01

A glimpse of the logic

```
DEFINE
    FUNCTION SVGradarFromTable = (
            _Nodes: table,
            _EdgeHex: string,
            _FillHex: string
        ) =>
        VAR CX = 100
        VAR CY = 100
        VAR _Levels = 5
        VAR RMin = 25
        VAR RStep = 11
        VAR ROuter = RMin + RStep * _Levels + 12
        VAR NodesClean   = FILTER(_Nodes, NOT ISBLANK([Score]))
        VAR NodesLimited = TOPN(7, NodesClean, [Attribute], ASC)
        VAR WithSort =
            ADDCOLUMNS(
                NodesLimited,
                "OrdSafe", INT(ROUND([Order],0)),
                "SortKey",
                    COALESCE(INT(ROUND([Order],0)), 1000000) * 100000
                    + RANKX(NodesLimited, [Attribute], , ASC, DENSE)
            )
        VAR WithOrd =
            ADDCOLUMNS(
                WithSort,
                "Ord", RANKX(WithSort, [SortKey], , ASC, DENSE)
            )
```

DATA PILLS 01

From code... to insight

Radar Chart: SVG + UDF + DAX / Flexible from 3 to 8 nodes
